

Flint Metal Center

“Environmental stewardship is more than reducing energy consumption and the creation of waste. At GM, it drives us to not only operate cleaner and greener facilities but to serve as guardians of the environment in our communities, as well.” – Amy D. Farmer, Flint Engine complex director

Vital Statistics:

Clean Corporate Citizen since 2007
Landfill-free since 2010

Operation:

Automotive Stamping

Contact:

G2238 West Bristol Road
Flint, Michigan 48553
Genesee County

GM Flint Metal Center began operations in 1954 as Chevrolet Stamping. Facility operations consist of automotive sheet metal stampings, which include hoods, fenders, and miscellaneous small parts. In addition, frames and miscellaneous parts are assembled onsite.

Flint Metal Center has continually made strides with reducing waste and energy consumption, and has provided support to outreach activities in the Flint Area.

Environmental features include:

- Integrating environmental factors into daily operations, resulting in an 8.9 percent reduction in total energy consumption in 2011.
- Operating landfill-free, meaning all of the site's daily waste is recycled, reused or converted to energy.
- Surpassing the U.S. EPA Energy Star Challenge for Industry in 2011 for reducing energy intensity by 27 percent and avoiding 14,857 tons of greenhouse gases.

Community, Environment and Education Commitment:

- Providing support to local community environmental outreach programs, including an Earth Day celebration with local elementary schools where first and third grade students are taught how to reduce, reuse, and recycle household wastes.
- Mentoring local high school students with in-stream sampling through the Flint River Watershed Coalition and GM Global Rivers Environmental Education Network (GREEN) program.
- Participating in the Flint River GREEN's planning committee, including coordinating mentors for all participating area schools.
